AMERICAN SCALE CO., Sta. B, Kansas City, Mo.

MACHINIST VISES AT CLOSE FIGURE

The American Scale Co., with sales headquarters at Kansas City and main offices and factory at Pleasant Hill, Mo., announces a new line of machinist vises which is said to combine quality, utility and close price in appealing to the jobbing and retail trade.

Coming from such an organization as that of the American Scale Co., with its accomplishment in the production of scales, anvils, vises, tire shrinkers, pump jacks, feed cookers, tank heaters, land rollers and a variety of hardware specialties — naturally the new machinist vises will receive more than ordinary consideration from the trade.

Of particular interest are the plain and swivel base vises, which are stocked by hardware and accessory jobbers throughout the West. This is a particularly well made tool, with the bar and vise screw of steel, the latter with machine cut threads, while the jaw and body are of semi-steel. It has an unusually attractive finish in black enamel, trimmed in red, and the jaws as well as the face of the handy anvil at the rear are polished.

Both the plain and the swivel base vise are made in three sizes, Nos. 2, 3 and 4 having jaws with width $2\frac{3}{4}$, $3\frac{3}{4}$ and $4\frac{1}{4}$ inches respectively, opening $2\frac{1}{2}$, 3 and 6 inches respectively. The company states that they are offering these to the trade at an unusually close price so that they can be offered to the consumer at an attractive figure, making them ready sellers. This is an especially valuable vise for home and garage use, and the swivel base vise with jaws faced with hard tool steel, knurled on the face, makes an attractive buy for any machine shop or constantly-using mechanic.
